

Seasonal Decomposition

decomposition_method | source-row order | page 1

Method type: decomposition_method
Design: Additive classical decomposition of ordered G3 with assumed period 12.
Formula: $y_t = \text{Trend}_t + \text{Seasonal}_t + \text{Remainder}_t$
Variables: G3
Series order: source-row order
seasonal_period = 12
trend_variance = 2.5587455987978207
seasonal_variance = 0.1635672377372171
