

Time Series in R

software_workflow | source-row order | page 1

Method type: software_workflow

Design: R-style robust STL decomposition of G3 with period 12 and seasonally adjusted trend regression.

Formula: $\text{STL}(y, m=12, \text{robust}=\text{TRUE})$; $\text{adjusted_t} = y_t - \text{seasonal_t}$

Variables: G3

Series order: source-row order

period = 12

robust = True

adjusted_trend_slope = -0.0030822895295156993
